

CognitiveAIOps

Executive FAQ - Interactive Presentation

1

How does CognitiveAIOps handle RBAC and ABAC across different enterprise apps?

Learn how we create self-evolving, auditable entitlement layers...

2

How is CognitiveAIOps different from chatbots or workflow automation?

It's not a chatbot—it's an agentic AI ecosystem...

3

What does "federated AI" mean in this context?

Each enterprise system hosts its own specialized agentic model...

4

How do external tools like JIRA, ServiceNow, or PTS integrate?

CognitiveAIOps uses a manifest-based integration model...

5

How are new workflows onboarded or updated?

Entirely declaratively through YAML manifests...

6

How does the platform ensure governance and compliance?

Each manifest defines what's allowed, when, and by whom...

7

How does CognitiveAIOps improve productivity and business outcomes?

Every user and system action generates telemetry...

8

How do humans stay in control of automation?

Human-in-the-loop is core to our design...

9

What happens if one model or domain fails?

Fault tolerance is built-in with independent domain agents...

10

What's the ROI compared to traditional AI platforms?

No rip-and-replace required...
